

Yaara Barak, Roi Birger and Reut Maslansky Erel Segal Halevi

Polity-Correct Goal

An interface that allows direct communication between a member of the Israeli Parliament and citizens about legislation in Israel.

Polity-Correct Functionality & Algorithm

Citizen:

- Voting for a law.
- View other users' votes.
- •Matching a Parliament member to a citizen (using KNN algorithm)

Parliament Member:

- •View a list of laws.
- •View temporary statistics of users by political group or all citizens.

Introduction

Nowadays, in the State of Israel, the legislative system doesn't involve the ordinary citizen in the legislative process and doesn't allow one to express one's own opinion regarding a law that will be enacted.

Polity-Correct, allows a citizen to actively take part in the process of enacting government laws.

Polity-Correct creates a common interest for both parliamentarians who want to "score" with their constituents and citizens who want to express their views on the country's laws.
